Attention All Bay Area GDF Owners and Managers

Did you know?

Starting April 1st 2009 a new regulation will take into affect that could shut down your Fueling Station.

BAAQMD will be strictly enforcing this new regulation.

The regulation: All gas stations must have an Enhanced Vapor Recovery System (EVR) Installed.

Have you selected your contractor yet?

Contractors who do gas station facility modifications are in a niche market. If you wait too long, many of these specialty contractors may be too busy to do your upgrades in time. If you would like to keep your facility up and running, make plans to have a specialty contractor come out to your facility ASAP.

How long will it take to install all the components to comply with Phase II EVR?

A typical EVR without ISD installation will take 5-10 days.

A typical EVR with ISD installation will take 7-12 days.

How much will it cost?

Our pricing is very competitive with other contractors. However since the layout of each gas station is different, a single price cannot be given for all gas stations. Please Call us at (650) 616-1200 for a free, no obligation quote.

Why should you pick TEC Accutite?:

TEC Accutite has over thirty years of experience in the specialized industry of Fueling System Construction. You can rely on us for all your Fueling System needs. We will get the job done right and on time.

We have done various tasks for fueling stations, ranging from constructing fueling sites from the ground up, renovating existing fueling sites to better meet the owner's needs, to yearly compliance testing for various fueling sites. We have worked with both small and large companies and have successfully fulfilled their fueling facility needs.

Give us a call today, and let our experience assist you with designing and installing an EVR system that will suit your needs and keep your facility in compliance with all CARB Executive Orders.
